

Call for smart people!

PROPOSAL FOR THESIS DEVELOPMENT – PHYSICS AND ENGINEERING

Microelettrica Scientifica, a company of Knorr-Bremse group, the world leader in train and trucks components, is searching for a smart student willing to develop her/his thesis work in the field of high-voltage measurement systems.

In particular, the student will join the company as intern and will help the Metering department in developing an advanced solution for the fine-tuning of measurement instruments used in the railway field for the determination of energy consumption of trains.

The thesis will focus on the development of an automatic system for the reduction of phase delay of high-voltage signals in a hard EMC environment: the train roof! You will face a lot of challenges: parasitic capacitances, reduced spaces, real on-field testing...

Are you ready?
